**BANNER AMERICAN PRODUCTS INTRODUCES NEW
FOLIANT SERIES SINGLE-SIDED LAMINATOR**

**Banner American's New Foliant Series Laminator Provides Perfect Single-Sided Lamination Solution for
Small and Medium-Sized Printing Houses and Book Publishers**

(Temecula, CA)... Banner American Products, Inc. proudly announces the introduction of its new Foliant Series laminators. Specifically designed for small and medium sized printing shops and book publishers, the affordable Foliant Series laminator provides the perfect solution for high quality single-side lamination of smaller project runs, where often only a few hundred or more items, such as book covers, brochures, magazine covers, or post cards require lamination.

The tabletop Foliant Series is available in working widths from 14 1/2" to 28" wide and working in speeds of up to 40 feet per minute.

The Foliant Series comes with a loading conveyor belt for easy manual feeding and can be connected to an optional Foliant Series separator for automatic separation of laminated sheets. The easy to operate control panel displays important run counts, working speed, exact temperature and how much unrolled film is still available.

The Foliant Series laminator utilizes polypropylene film, gloss or matte, 1 - 1.3 mils thick, applied at about 210oF. An excellent lamination finish is ensured by a chrome-coated working roller regulated by exact thermal control. Finished laminated sheets do not curl after lamination, and with three lined up edges are immediately ready for bulk stacking and cutting. The Foliant Series laminators retail between \$4,000 and \$13,000.

The Foliant Series laminator was awarded the "Gold Embax Print" as best of show for the category of machines and equipment at Embax Print 99 in Brno, Czech Republic.

For more information on the Foliant Series laminator contact: Alan Parkhill, Banner American Products, Inc. at (951) 296-9780 or view the company's web site at www.banam.com.
